DICTYS Cretensis, is the supposed name of a very ancient Historian, who served under Idomeneus, King of Crete, in the Trojan War, and who is said to have written, the History of that Expedition, in nine books; but that which now goes under his name is thought to be spurious, and a production of the 15th century. The following are the earliest and best editions of this Author, sometimes printed along with Dares, another Trojan Historian.—Dares et Dictys, Historiæ Belli Trojani, à Franc. Faragonio, absque ulla nota. 4to. This is supposed to have been printed at Mentz, x about A. D. 1470, and to be the editio princeps.—Ephemerides Belli Trojani, libri vi. sine ulla nota. 4to. This contains Dictys Cretensis alone. Some suppose it to have been printed at Mentz, others, more probably, at Cologne, by Arnold Thervernen, about A. D. 1470.—Dares et Dictys Cret. à Masello. Mediol. 1477, 4to. These two, though in this edition bound together, appear to have been printed as separate works.—Dares et Dictys ex edit. Faragonii. Messanæ, Guil. Schomberger. 1498, 4to. This is the first edition to be found with a date.—Dares et Dictys, ex eadem editione Faragonii. Venet. Christ. Mandellus de Pensis, 1499, 4to.—Dares et Dictys. Vitebergæ, J. An edition preferred to the one preceding.—Dictys Cretensis de Bello Trojano, et Dares Phrygius de Excidio Trojæ: in usum Delphini cum interpret. Verona, 1734, 4to.—There is also a translation of them both into English, under the title, The Auncient Historie, and only trewe and syncere Chronicle of the Warres betwixte the Grecians and the Troyans, and subsequently of the fyrst everevyon of the auncient and famouse Cytye of Troye, under Lamedon the King, and of the laste and fynall dystruction of the same under Pryam. DORINGK, or Thoringk, Matthias, a Writer of the 15th century, was born at Kiritz; the time of his death is a disputed point. Casimir Oudin gives 1494 as the date of that event, which Marchand, with some proba- j bility, reduces to 1464. While Professor at Magdeburg, at which time strictures and objections against the short Commentaries on the Scriptures of Nicholas de Lyra, were published by Paul de Burgos, Doringk undertook their defence, and farther illustration.—The different pieces which he wrote on these subjects were collected together, and inserted in an edition comprehending the Works of both those Authors. Paris, 1590, 6 vols. fol. It went through several editions.—To him some have ascribed the Miroir Historical, known by the name of, The Chronicle of Nuremberg; but there is reason to think it was by another hand.—He is said to have compiled also, a continuation of the Chronicle of Theodore Engelhuisius, from 1420 to 1498, printed k in the Collection of German Historians, by Mencken.

ELZEVIRS, a celebrated family of Printers in the 17th century. Of twelve who exercised the Art, seven have distinguished themselves by the
c beauty and excellence of their productions. The first of this name was Louis, who printed at Leyden, from 1595 to 1616. He was the first who made the distinction of u from v and i from j; which was shortly after followed by the introduction of U and J among the capitals, by Lazarus Zetner, of Strasburg, in 1619. Isaac succeeded Louis as Printer at Leyden: his productions extend from 1617 to 1628. Bonaventure and Abraham, brothers and partners, next carried on the business at Leyden, from 1626 to 1652, when both died. The neat and correct 12 editions are attributed to their press; they likewise printed an extensive Collection of the Historians of almost every State in the world. John, son of Abraham, printed in partnership with Daniel at Leyden,
d from 1652 to 1654; and alone from 1655 to 1661. Louis second, and son of Isaac, printed alone at Amsterdam, from 1640 to 1655; and in partnership with Daniel till 1662, when he died. Daniel who was son of Bonaventure, and previously in partnership with John, from 1652, to 1654; carried on business alone after the death of Louis second, until his decease, 1680. His widow carried on the business but a short time longer. The works of these Printers are very numerous; and remarkable for the clearness, elegance and closeness of the types, the solidity and great whiteness of their paper, and the excellence of the pressmanship. M. Brunet has given a copious list of the small Elzevir Editions. The following list is what has been called the

To it is prefixed, the Mathematical Preface, by the famous Dr. John Dee, a piece of great curiosity; also a brief Treatise of mixed and composed regular Solids.—Euclid's Elements of Geometry; by Rudd, with John Dee's Mathematical Preface. Lond. 1651, 4to.—Euclid's Elements; the whole fifteen books compendiously demonstrated. To which is added, Archimedes Theorems of the Sphere and Cylinder, investigated by the method of Indivisibility; never before in English, by Isaac
z Barrow and Thomas Haselden. Lond. 1732, 1751, 8vo. The earlier editions by Barrow himself are, Lond. 1660, 1686, 1696, 1705, 1715, 8vo.—Euclid's Elements of Geometry; with a Supplement of divers Propositions and Corollaries. To which is added, a Treatise of regular Solids, by Campane and Flussas; likewise Euclid's Data, and Marinus his Preface. Also, a Treatise of the Divisions of Superfices, ascribed to Machomet Bagdedine, but published by Commandine at the request of John Dee of London. Done out of French, by Reeve Williams; and now revised, corrected, and greatly improved, by
d Samuel Ashby. Lond. 1748, 12mo. The fifth edition. This edition contains the first six books, the eleventh, and the twelfth. It is an excellent edition, and preferable to all preceding ones, with the exception of De Chales'.—The Elements of Euclid; the first six, the eleventh, and twelfth. In this edition the errors by which Theon and others have long ago vitiated these books, are corrected, and some of Euclid's demonstrations restored; also the book of Euclid's Data in like manner corrected, by Robert Simson, M. D. Professor of Mathematics in the University of Glasgow. Glasg. 1756, 4to. Reprinted, Glasg. 1762, 8vo. 3d edition; with the Elements of Plane and Spherical Trigonometry. To which are added, Plane and Spherical Trigonometry, Tables of Logarithms from 1 to 10,000, and Tables of Sines, Tangents, and Secants, natural and artificial.

An excellent Work, and in merit not inferior to Dr. Simson's.—For. Edit. Elementorum libri xv. Lat. cum Campani Commentariis. Ven. 1482, fol. Editio princeps. A very rare and singular production; and very remarkable as being the first in which mathematical delineations occur.
